

The successful engineers will install the Fire systems to the relevant industry standards, providing exceptional customer service with industry leading technical knowledge. We are looking for engineers who have the ability identify and rectify problems before they occur.

This is a fantastic opportunity for a time served Installation Engineer to work within a high performing team, focusing on a geographical region. We offer our engineers the opportunity to work for a market leading brand, working with excellent technologies and clients.

We safeguard many UK commercial and domestic environments to more than 2,000 customers

You must provide excellent customer service and install projects to support project expectations and requirements of both the internal and external customers, establishing and maintaining effective relationships with customers. Install the appropriate devices as per project plan, working safely and responsibly to avoid injuries, damage to property, and the loss of unused materials.

Work closely with the planning team, ensuring your time is managed efficiently and jobs are prioritised correctly. Correctly complete online Engineer work reports, handover certificates/BSIA Certificates or checklist as appropriate.

Experience within Fire or Security systems and hold a relevant electrical qualification (18th edition/ NVQ/ City and Guilds etc). Had or have previous experience working in a customer facing environment, hold a full clean driving license and have the ability to lift and climb ladders.
